

a GRAFT growth: earlier placements condition every later choice

Local alcohol fragments A, B and C share this motif; R lies outside the matched atoms.

Three distinct target sites

Each site preserves C-C, C-O and O-H.

Each path is a joint assignment; occupied target atoms cannot be reused.

b Vary the constraints with a cut sweep

Methyl acetate: three illustrated source conditions

Uncut source

→ Grow

Mask O4-C5

→ Grow

Mask C2-O4

→ Grow

Pool the retained branches; decode on original bond weights.

c Decode each compressed family

The oxygen exchange preserves matching at $\tau_{iso} = 1$

Matching symmetry

One branch
correlated alternatives

Exchange O3 / O4

→ Search continuation
